                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δÃ
   The invention relates to diagnosing endometrial cancer in a subject CC suspected of having endometrial cancer comprising determining the Expression of a set of nucleic acid molecules or expression products in an endometrial sample suspected of being cancerous, where the set of concleic acid molecules comprises at least 2 nucleic acid molecules comprises at least 2 nucleic acid molecules sequences as given in the specification. CC The nucleic acids are used as an array of at least 2 of the 50 nucleic acids bound to a solid substrate. Also included is a solid-phase protein microarray comprising at least 2 antibodies or its antigen comported from the 50 fully defined sequences as given in the 50 thoding fragments, that specifically bind at least 2 different comported for the diagnosis of endometrial cancer, selecting and monitoring consecutions are discontined and identification of lead compounds useful for the cuseful for the diagnosis of endometrial cancer, selecting and monitoring content of endometrial cancer. The present sequence is one of 50 treatment of endometrial cancer. The present sequence is one of 50 camples in the sequence is one of 50 treatment processed between cancerous and non-cancerous contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Db
                                                                                                                                                                                                                                                                                                                                           Diagnosing endometrial cancer comprises determining expression of nucleic acid molecules or expression products that are differentially expressed in normal and malignant endometrium -
                                                                                                                                                                                                                                                                                                               Claim 1; Page

Sequence 8, Application US/08472809B Patent No. 5925564 GENERAL INFORMATION:

APPLICANT: Schwartz, Robert J.
APPLICANT: DeMayo, Franco J.
APPLICANT: O'Malley, Bert W.
TITLE OF INVENTION: Expression Vector
TITLE OF INVENTION: Method of Use
NUMBER OF SEQUENCES: 8

Systems and

Sequence 9, Application US/09852261 Patent No. US20020083477A1 GENERAL INFORMATION:

APPLICANT: GOLDSPINK, GEOFFREY
APPLICANT: TERENGH: GIORGIO
TITLE OF INVENTION: REPAIR OF NERVE DAMAGE
FILE REFERENCE: 117-351
CURRENT APPLICATION NUMBER: US/09/852,261
CURRENT FILING DATE: 2001-05-10
PRIOR APPLICATION NUMBER: GB 0011278.9
PRIOR FILING DATE: 2000-05-10

NUMBER OF SEQ ID NOS:

```
APPLICANT: Rosengren, Linda
TITLE OF INVENTION: NEW METHODS
FILE REFERENCE: 13425-111001
CURRENT APPLICATION NUMBER: US/10/161,088
CURRENT ETLING DATE: 2002-05-31
PRIOR APPLICATION NUMBER: US/10/161,088
CURRENT ETLING DATE: 2001-06-01
NUMBER: SEQ ID NOS: 3
SOFTWARE: FASTSEQ for Windows Version 4.0

with an oligo(dT) primer [ATGTGGCCTTTTTTTTTTTTTTT]
double-stranded cDNA was ligated to a DraIII adaptor
[TGTTGGCCTACTGG], digested and cloned into distinct DraIII
sites of the pME18s-FL3 vector (5' site CACTGTGTG, 3' site
CACCATGTG). XhoI should be used to isolate the cDNA
insert. Size selection was performed to exclude fragments
<1.5kb. Library constructed by Dr. Sumio Sugano
(University of Tokyo Institute of Medical Science).
Custom primers for sequencing: 5' end primer

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
normalized cartilaginous tumor library cDNA Library Preparation:
M.B. Soares Lab Clone distribution: clones will be available
through Research Genetics (www.resgen.com) The following repetitive
elements were found in this cDNA sequence: 1-43,
partich#Low_complexity 118-164, >POLY_A#Simple_repeat

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized pineal glands library cDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized considered under appropriate and limited collaborative arrangements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Seq primer: M13 Forward POLYA=Yes.

The sequence tag present in the cDNA between the NotI site and the
oligo-dT track served to identify it as a clone from the normalized
adult 12-Day-Embryo library. cDNA Library Preparation: M. Fatima
Bonaldo, Ph.D. Clone distribution: clones will be available through
Research Genetics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  primer: M13 Forward
                                                                     // Ab__nost="NHUB" (Life Technologies)"

// Ab__nost="NHUB" (Life Technologies)"
// Ab__nost="NHUB" (Life Technologies)"
// Ab__nost="NHUB" (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Ecc RI; The UI-R-El library is a subtracted library derived from the UI-R-El library is a subtracted library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18 day embryo. The tag is a string of 3:5 nucleotides present between the Not I site and the oligo-df track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-El) was constructed as follows: PCR amplified CDNA inserts from a pool of UI-R-E0 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the UI-R-E0 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-E1 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /clone="UI-R-E1-gh-f-04-0-UI"

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized rat heart pool library cDNA Library Preparation: M Be Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

The resulting pool of approximately 5,000 clones represented about 33.3% of the final driver population. A set of about 2,000 arrayed clones from each of the five normalized libraries of brain (CTO), heart (CSO), kidney (CUO), aorta (CWO), and placenta (CXO). The resulting pool of about 10,000 clones represented about 66.6% of the five five normalized libraries of brain placenta (CXO). The resulting pool of about 10,000 clones
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bonaldo, Lennon & Soares (Genome Research Genome 6: 791-806, 1996). For construction of the DKO subtracted library, plasmid DNA from each of the five individually tagged normalized libraries was mixed in the proportions specified above and electroporated into competent bacteria for production of single-stranded circular DNA representing the pool of libraries. Single-stranded circular DNA representing these five normalized libraries was then used as a tracer in a subtractive hybridization with a driver (PCR amplified inserts from a plasmid DNA with a driver (PCR amplified inserts from a plasmid DNA control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              represented about 66.6% of the final driver population.
